

## YOUNG ADULT DRIVER ELECTRONIC DEVICE OBSERVATION FORM

- Count only young adult drivers (ages 18 to 24).
- Choose a day to conduct your pre-observations.
- Do not count the same car twice (multiple teams in the same location).
- Please only count in the morning or afternoon – not both (you'll likely be counting the same cars).
- Place same students (if possible) at same area, at same time of day on the same day of the week for both pre- and post-observations.
- Count *at least* 100 cars.
- BE SAFE!
- If using multiple teams, give each team their own complete set of Observation Forms.
- How to get an accurate count:
  - Don't guess. If you can't see well enough change your location, get vehicles to slow down or get an additional person to help.
  - Observations are generally more accurate when made on stopped vehicles. The opportunity for a good view of each driver is better at Stop Signs or intersections with a traffic signal. Take a careful look at the driver.
  - If you miss counting a car, it's okay. It's best to be accurate.
  - Use the same location and conduct the pre- and post-count at the same time of day. Use the same team, if possible, for consistency.
  - Organize your observation team and coordinate where everyone will be standing, how many cars you will be observing and the time frame the counts will be taken.
  - Make sure everyone understands what to do and what to observe. It may be helpful to observe a few cars together, to make sure everyone has a clear understanding of what they are looking for and what information and codes will be recorded below.
- Scan and return these forms to [s-tisdale@tti.tamu.edu](mailto:s-tisdale@tti.tamu.edu) OR fax with cover sheet documenting number of pages, your name and contact information to 210-321-1299. You will receive a confirmation of us receiving the documents.
- Questions? Please contact us!
