

MISPERCEPTIONS

PERCEPTIONS

MDMA (or Molly) will help make you more outgoing and fun.

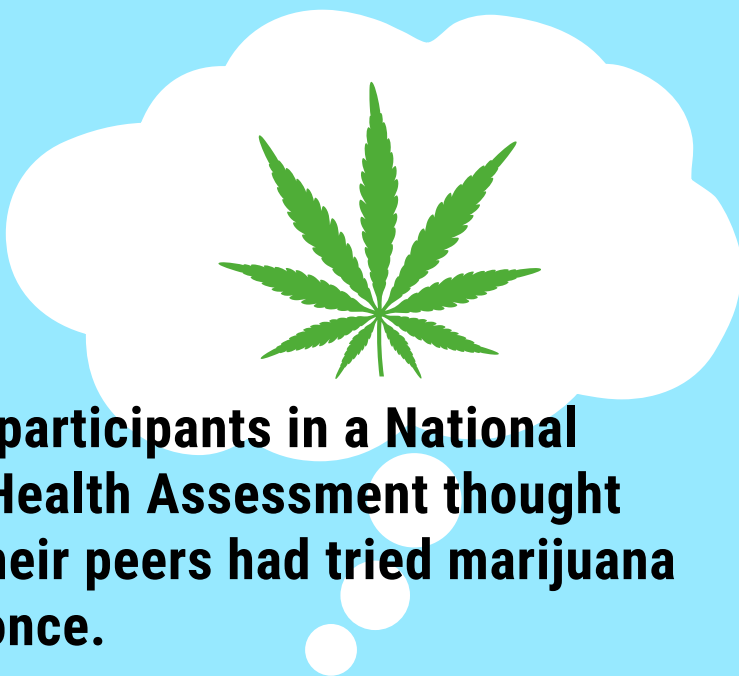

REALITY

Molly can cause confusion, severe anxiety, and decreased motor skills.

In 2019, participants in a National College Health Assessment thought 88% of their peers had tried marijuana at least once.

ACHA, Fall 2019

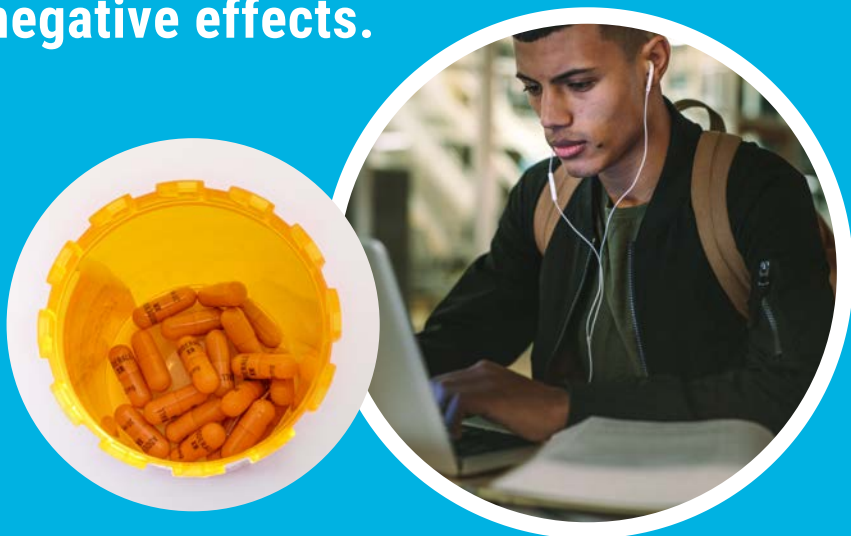

In reality, that same assessment showed 57% of participants had never even tried marijuana.

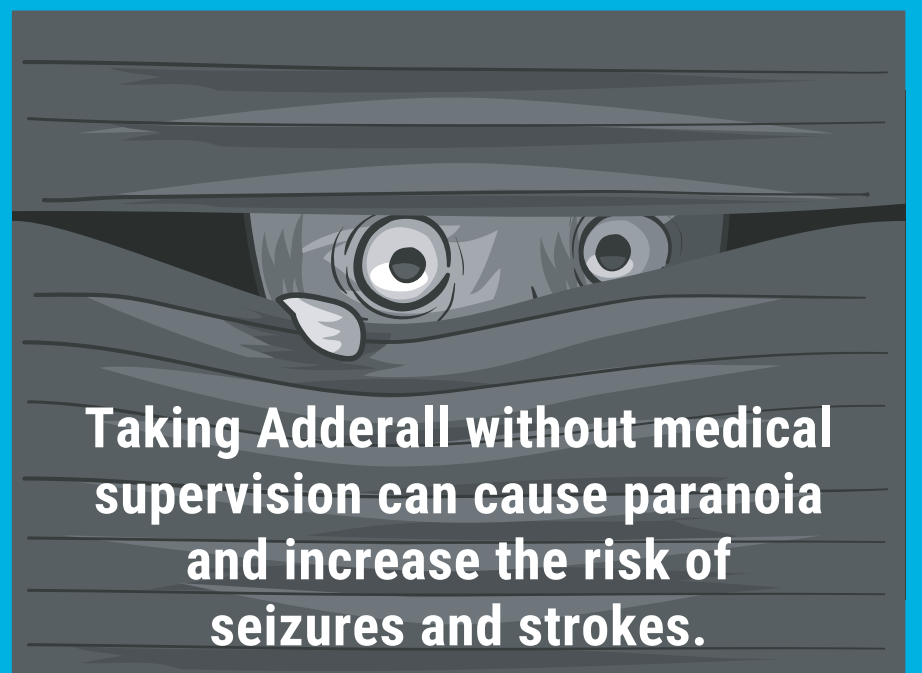

ACHA, Fall 2019

Taking Adderall unprescribed can help you focus and study for tests without negative effects.

Taking Adderall without medical supervision can cause paranoia and increase the risk of seizures and strokes.

Choose to drive sober!
